ABOUT US

At VPS we specialise in providing Integrated Security for your property, people, and assets, delivering innovative risk mitigation strategies to help manage the challenges that you face on a daily basis. Whether you are managing a single property or a complex infrastructure project, our range of products and services allows for the creation of bespoke solutions aligned to your specific needs, providing total peace of mind and optimal value generation. Alongside the delivery of traditional property management and security services, we are committed to harnessing the latest technology advancements to benefit you through increased functionality and enhanced risk mitigation capabilities. Regardless of your needs please contact our team of experts to find out how we can help you.

MONITORING STATION AND INVESTMENT IN SYSTEMS

VPS MONITORING STATION

All of our monitored solutions benefit from the support of the award-winning VPS Monitoring Station.

Our Monitoring Station operators carefully evaluate both live and recorded images/activations and follow agreed response plans. This could be to immediately contact keyholders, the VPS response team or the Police, depending on the type of system installed. Our team are on hand to ensure that any activation of the security system is communicated to the appropriate individuals for a rapid response.

VPS hold a number of industry accreditations covering the full range of products and services offered. This helps provide reassurance over the quality and professionalism of our service, through the standards we adhere to.

ACCREDITATIONS

- ♦ BS9518:2022 - monitoring of received signals from fire and security systems
- ♦ BS8418:VSS 2021 - monitoring received signals from detector activated CCTV systems
- ♦ All monitoring operatives are Security Industry Authority (SIA) Licensed for Public Space Surveillance
- ♦ Business Continuity and Disaster Recovery plan in place, supported by second Disaster Recovery Monitoring Station - guarantees uninterrupted coverage

SERVICE CAPABILITIES

- ♦ CCTV Tower Monitoring
- ♦ Issue Audio Challenge
- ♦ Alert Tower Monitoring
- ♦ Fixed System CCTV Monitoring
- ♦ VPS SmartAlarm Monitoring
- ♦ Intruder Alarm Monitoring
- ♦ Fire Alarm Monitoring
- ♦ Lone Worker Management
- ♦ Traffic Monitoring
- ♦ Variable Message Sign Management
- ♦ Remote Access Control
- ♦ Call Handling

INVESTMENT IN SYSTEMS AND SOFTWARE

Sentinel is the underlying operational platform used within the Monitoring Station. VPS benefits from a long-standing relationship with the developers allowing us to be early adopters of innovation, automation and efficiency gains. Sentinel can be integrated with the vast majority of other platforms and operating systems seamlessly.

False alarm filtering software removes up to 60% of false CCTV alarms before they are presented to an operator for review, allowing them to focus on real alarms and threats across our client sites. The software has applied learning, meaning it learns from experience to continuously increase the number of false alarms that can be safely closed without operator intervention.

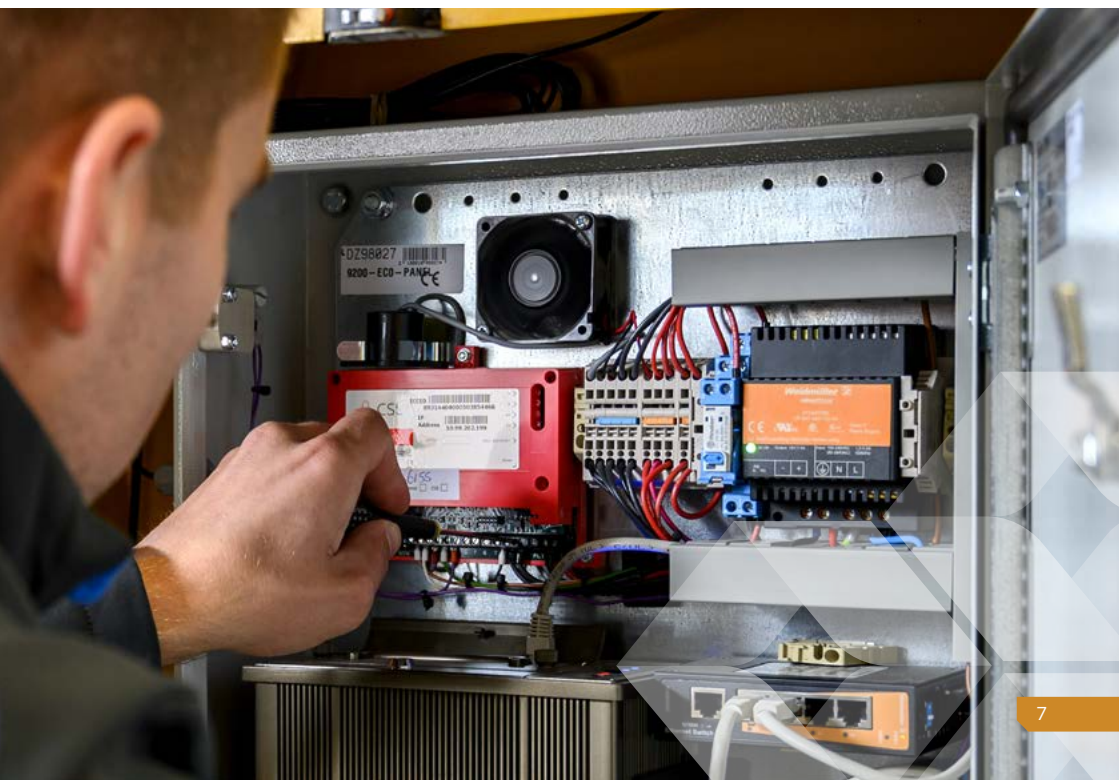

Fault Finding Software automates fault detection and reporting across VPS CCTV systems, ensuring these are identified and reported before they become critical issues and have a detrimental impact on the security of any site, including:

- ♦ Connection Issues
- ♦ Hard Disk Failures
- ♦ Camera Failures
- ♦ Recording Issues
- ♦ Image Integrity
- ♦ Time and Date Inaccuracy

We can investigate the takeover of existing systems for clients if they hold NSI or SSAIB accreditation, allowing us to transfer the monitoring of site systems to the Monitoring Station.

Our existing resource provides far more effective means of delivering a monitoring service than a small on-site security team. Legislative breaks, holidays and absences are covered seamlessly and typically at a lower cost as it is a shared resource rather than dedicated resource.

SECURITY SERVICES

VPS security systems can be meshed together to provide a comprehensive solution covering every area of risk. In addition, these solutions can be added to or removed as the project progresses, ensuring the customer only pays for what they need, when they need it. VPS have the experience needed to design a solution fit for purpose, using a range of products and services, managing varying levels of risk throughout the lifecycle of your property or site.

Core services cover the complete lifecycle from an initial risk assessment, to security, monitoring, clearing, cleaning, maintenance and preparation for new tenants. These services protect properties against unauthorised access and a variety of hazards such as arson, theft, squatting and unauthorised occupation.

In addition, VPS hold the SSAIB CoP 2004 accreditation for design, installation and maintenance of temporary alarm systems.

VPS ALARMS

VPS specialise in rapidly deployed wireless alarm systems designed for void property. VPS alarm systems can be paired with a range of detectors to help deter unauthorised access and vandalism.

VPS SMARTALARM

Remote monitored security system with rapid response. Entirely stand-alone with a long-life battery and on-board tamper detection.

Alarms are installed in tandem with VPS sensors which can be placed anywhere within radio range of the unit (up to 50m) providing instant detection and alerts on a range of incidents including intruders and flooding.

In addition the alarm has built in tilt and flood sensors as standard.

- ◆ Uses wireless internal and external sensors to monitor the entire site and protect against intruders
- ◆ Pairs with smoke and moisture detectors
- ◆ Requires no mains electricity or hard wiring. Powered by a long-life battery, lasting up to two years
- ◆ Communicates over the GSM mobile phone network, so requires no phone line
- ◆ Alarm can be set to automatically arm itself at a time predetermined by the client, so if authorised visitors forget to reset it, the property will not be left unprotected

VPS SMARTALARM GOLD

This system can be paired with a Verifeye visual camera sensor, providing visual verification on activation, helping to eliminate false triggers. When activated, this advanced PIR will capture a 5 second colour video clip at 3 frames per second.

In addition, the VPS SmartAlarm Gold can be linked to a remote keypad, allowing the alarm unit to be hidden away and controlled from a different location within the property. The internal and external sirens can be mounted in locations within the property, and on the exterior of the premises, providing audible and visual indications that there is an alarm present.

VPS ALERT TOWER

Low resolution video confirmation alarm system, available in pairs, mounted on robust moveable towers.

- ♦ Entry level battery powered armoured security system, fully integrated into a mobile solution
- ♦ Alarm confirmation using low resolution CCTV image capture
- ♦ LED Infra-red for night vision offering up to 12m illumination
- ♦ Multiple Alert Towers can be deployed onto a single site with master slave relationship
- ♦ Maximum 22 devices per system
- ♦ Off tower mounting solutions using pole clamps or wall mounts
- ♦ 100dB sounders with optional audio challenge
- ♦ Battery life of up to 2 years
- ♦ Remotely monitored by VPS
- ♦ Multiple tamper detection safeguards
- ♦ Side mounting solution for active beam pairs, creating long range detection of up to 100m
- ♦ Upgrade options for Fire Evacuation and/or First Aid Call Points
- ♦ Remote engineer diagnosis/programming
- ♦ Cost-effective solution
- ♦ Compliant to insurance requirements

VPS SMART TOWER

Modular tower that incorporates all the components you'll need to provide effective CCTV monitoring and recording in a robust and rugged housing. Designed for ease of installation and relocation where necessary, VPS Smart Tower units utilise wireless communication technology to minimise disruptive cable runs and virtually eliminate any ground work or infrastructure requirements. An uninterruptible power supply ensures the system remains functional in the event of power failure.

- ♦ PTZ camera with integrated intelligent IR illumination (with up to 150m night vision) standard resolution & industry leading HD
- ♦ 32 Radio PIR detectors
- ♦ 64GB SD card providing up to 31 days recording at 12 frames per second
- ♦ Live audio challenge facility
- ♦ Uninterruptible power supply for up to 4 hours or 15 hours with battery backup
- ♦ Un-steered sim uses all networks to ensure connectivity. Data stored on our own private network, ensuring data security and keeping us fully in-line with GDPR
- ♦ Multiple anti-tamper mechanisms, including anti-masking and anti-shock
- ♦ Extendable mast up to 7m
- ♦ PIR sensors can be placed up to 1km away from the Smart Tower unit
- ♦ Patented technology
- ♦ Optional video analytic cameras

POWER OPTIONS:

- ♦ Fuel cell provides maintenance-free, zero-emission operation
- ♦ Solar power options
- ♦ BS8418:VSS 2021 compliant

VPS STEEL SECURITY

STEEL SCREENS

VPS' high security perforated steel screens allow light and ventilation into the property, while keeping unwanted visitors out. They are secured with back bars and sit flush within the existing windows, without leaving any opening for objects to be pushed through or for the screen to be forced off. Our screens have been designed with a unique fixing mechanism that does not cause any damage to the fabric of the property.

CUSTOM STEEL

Custom-made to fit unusual window styles or sizes, our custom sheeting delivers the same security benefits as our steel screens. It can provide complete protection in many areas around your building, including meter boxes. Our custom sheeting is affixed using VPS patented screws so cannot be removed with a standard screwdriver.

VPS SMARTDOOR

This high security door utilises industry leading Bluetooth and keycode entry options with 3 point locking and heavy duty hinges, preventing unauthorised access whilst allowing instant access when it's needed. The SmartDoor eliminates the need for accompanied access visits - no need to meet anyone to collect keys or provide access. Users can be given remote access as and when needed and for an agreed period of time. In addition to all the security benefits of the door itself, the lock also acts as an access reporting system as it gathers detail on who accessed the property and at what time the door was unlocked.

KEYED DOOR

Designed to give a very high level of keyed security, these doors are fitted with a pair of three-lever locks, giving double-locking protection. They also come complete with piano hinges to ensure that the door cannot be removed, and have optional suited keys to assist with access management for those with multiple secured properties.

DIGIDOOR

A heavy duty, electronic, coded, security door which is easy to use and install, the VPS DigiDoor has all the benefits of a steel security door with the added convenience of a colour coded digital keypad, allowing keyless access to authorised visitors.

VPS CLEAN & CLEAR

VPS provide a full range of services required to prepare and maintain a vacant property, including clean and clear services, the removal of hazardous waste or sharps, lock changes and water system drain downs. Our trained operatives carry out services ranging from pest control to graffiti removal, ensuring that the value of your property is maintained throughout its period of vacancy.

PERIMETER PROTECTION

Where a vacant site includes compounds, forecourts, car parks or fields, it is essential to restrict casual passer-by access, which can impact on your public liability as well as result in unauthorised vehicle access. Perimeter protection can also help deter travellers/unauthorised encampments and fly tipping. Where this level of security is required, concrete barriers or bollards are effective. Bollards can be removable or retractable, allowing access to authorised key holders only, whereas concrete barrier units are designed to be both unwieldy and heavy, making vehicle access extremely difficult. The perimeter protection options VPS offer are far reaching and vary depending on the site requirements.

They include:

- ♦ Concrete blocks
- ♦ Heras Fencing
- ♦ Palisade Fencing
- ♦ Razor Wire
- ♦ Prickle strips

VPS WES+ FIRE ALERT SERVICE

Our VPS FireAlert Wes+ system is an innovative fire safety evacuation system that helps protect people, property and assets in building and construction sites.

With a long battery life, it delivers a cost-effective, efficient and practical solution. Quickly and easily deployed at any location, with additional units being easily added as the building starts to take shape using a robust wireless mesh network.

Fire Points are placed in accordance with your fire plan with possibility of unlimited number of units in any combination on one site. Heat, smoke or dust-proof smoke detectors provide active fire protection in enclosed areas and in temporary accommodation units.

VPS FireAlert Wes+ is EN54 compliant, CE marked and meets all mandatory fire safety guidelines and legislation.

VPS FIXED CCTV

Our fixed CCTV systems are all designed, installed and monitored in-house, meaning the whole process is managed by one supplier. They include the latest in AI technology which allows us to set up automatic detection without the use of sensors & remove false detections by up to 60%. Each system is specifically designed for your site using a carefully selected mix of technology for the the best possible coverage. In addition, VPS hold the SSAIB CoP 2003 accreditation, for design, installation and maintenance of CCTV systems.

DISINFECTION AND INFECTION CONTROL SERVICES

Hospital grade anti-viral disinfecting services that are suitable for both property and vehicles using non-toxic fogging.

In response to the Coronavirus (COVID-19) outbreak we have been supporting clients with anti-viral disinfecting services that are suitable for application to both property and vehicles. These cleaning services are intended to:

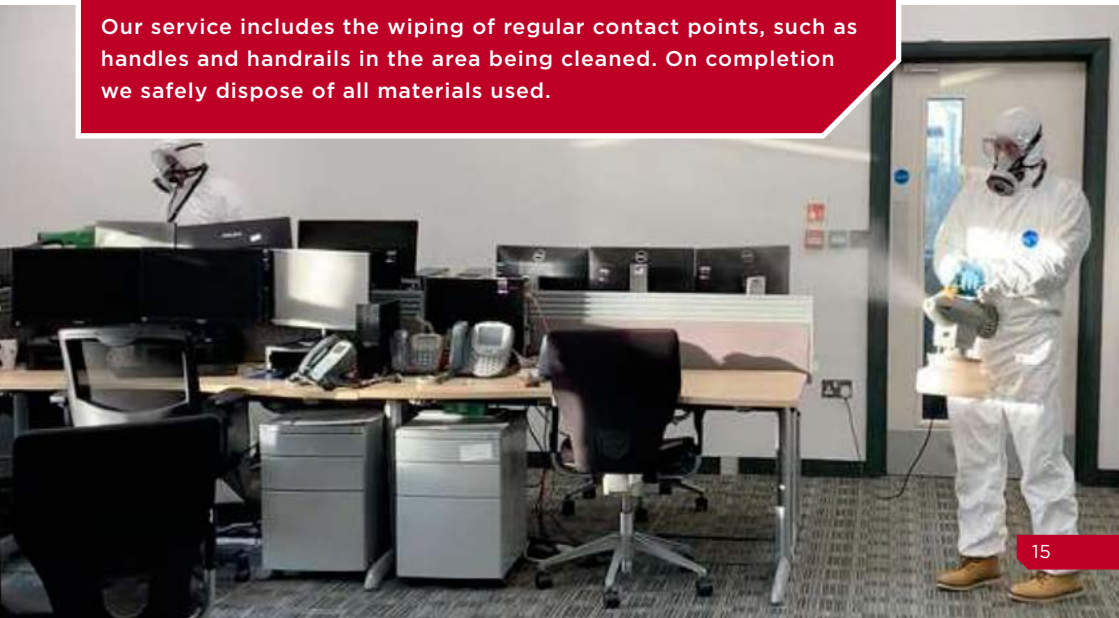

- ♦ Help reduce the spread of COVID-19
- ♦ Enable essential business operations to continue through providing customers with increased confidence in the safety of their working environment in these difficult times

WHY USE VPS DISINFECTION SERVICE?

Our disinfection service utilises a treatment known as fogging or misting whereby machines can fill rooms or vehicles with a fine mist of disinfecting particles. The residue left by this treatment continues to have anti-viral properties for up to seven days after the initial treatment. The particles of disinfectant are so small that the treatment is suitable in areas containing electronics such as an office or call centre, proving less intrusive than more traditional cleaning methods.

The hospital grade treatment used is non-toxic and therefore safe for a variety of surfaces including; carpets, upholstery, hard floors, cupboards, kitchen tops, chairs, desks, tables and walls.

Our service includes the wiping of regular contact points, such as handles and handrails in the area being cleaned. On completion we safely dispose of all materials used.

INSPECTIONS AND GUARDING

VPS INSPECTION SERVICES

GUARDING A VACANT PROPERTY FULL-TIME MAY NOT BE AFFORDABLE OR NECESSARY. VPS INSPECTION SERVICES HELP ENSURE YOU COMPLY WITH INSURERS REQUIREMENTS, WHILST SAVING YOU TIME, MONEY AND HASSLE.

As the trusted specialists in property security, VPS offer a range of solutions, allowing you to tailor your security needs to your budget. Our inspections, patrols, caretaking and rapid response services will keep you updated on any damage or security breaches, to give you and your insurers peace of mind. VPS Inspections are carried out by our in-house SIA licenced inspectors who attend site in fully liveried vehicles. Each inspection involves a comprehensive site review which includes the site perimeter, external buildings, internal buildings and meter readings, and can be customised to suit the particular requirements for a specific portfolio.

WHY USE VPS INSPECTIONS

- ♦ Comprehensive 52 point check to keep your site safe and secure
- ♦ Tailored reports to meet your requirements and insurance obligations
- ♦ Receive time and date stamped reports, high definition photographs and meter readings that can be downloaded in Excel
- ♦ Gain full transparency on any changes to the state of your property – all reports instantly uploaded to VPS Insights, our award-winning customer portal
- ♦ Minimise water damage and leaks
- ♦ Help prevent intrusion from squatters, vandals and unauthorised encampments, whilst saving you time and money
- ♦ Inspections available for occupied and vacant properties
- ♦ VPS are SIA (Security Industry Association) approved contractors, under the ACS (Approved Contractor Scheme)

INVESTING IN TECHNOLOGY

The VPS inspections platform has been designed and developed to ensure that our property inspections not only comply with your insurers stipulations, but also provide you with the most thorough and transparent solution to ensure the ongoing safety of your site, whether occupied or vacant. Completing inspections in real-time provides 100% accuracy, evidenced by photographs and real-time transfer to our reporting platform.

VPS LINK

VPS Link is our bespoke customer portal, allowing you to access your confidential inspection reports online at a time convenient to you. Once an inspection has been carried out your report is instantly uploaded to VPS Link, giving you full transparency at your fingertips. The data is all stored securely online, and can be safely and easily accessed using your own unique username and password. Unique logins allow data presented to be aligned to user, role or seniority across every property portfolio. The portal offers a convenient and secure place to store your property reports and associated photography, meter readings are also stored here and can be easily exported in Excel format. The portal will also highlight properties where a health and safety issue has been identified resulting in access being restricted until remedial works have been completed. VPS Link uses a clean, modern, graphically-led interface to present overview information and increasingly detailed data as you drill down. The portal software is designed to be responsive and works as well on a tablet as on a computer, so it can be easily accessed away from the office and out in the field.

VPS GUARDING SERVICES

VPS are trusted experts in deploying a range of manned guarding solutions across the UK. Due to our extensive service centre network and in house RVRC monitoring station, guarding requests can be received, actioned and deployed 24/7, meaning that security risks at site can be mitigated within a timely manner, regardless of when they occur.

Over the last 3 years, VPS has developed expertise within the reactive manned guarding sector. When the need is at its greatest we have been able to source and deploy presence to site within hours. This has resulted in VPS being selected as preferred reactive supplier to a number of major FM and property management companies nationwide.

AREAS COVERED:

- ♦ Relief guarding
- ♦ Holiday cover
- ♦ Urgent cover due to sickness
- ♦ Immediate reactive guarding
- ♦ Conflict resolution

STATIC GUARDING

VPS provide adaptive and bespoke guarding services across the UK. When the need is urgent, manned guarding is often the quickest and most effective way to protect a void property and mitigate the associated risks. We offer a 3 tiered service, ranging from a basic SIA licenced guard, to an intermediate guard who will also be trained in customer liason, all the way up to an advanced security guard who can also be First Aid and Fire Marshall trained.

In addition we can provide comprehensive assignment instructions, helping to ensure we meet our clients' expectations.

DOG HANDLERS

VPS provide a dog handler service which has proven to be an effective solution in the prevention of unauthorised site or property access. VPS utilise professional security dog handlers who act as an excellent visual security deterrent, and work with experienced guard dogs who are trained to use their heightened sense of hearing and sight to detect and prevent any wrong doing. With three levels available for varying levels of risk, you can be sure VPS will have an option to suit your needs.

CONCIERGE SECURITY SERVICES

Our concierge provision covers a wide range of services, including:

- ♦ Meeting and greeting customers and guests
- ♦ Day to day reception duties
- ♦ Access co-ordination
- ♦ Directing traffic and emergency services
- ♦ CCTV management/monitoring

We understand and focus on our customer's integrity and specific requirements. We provide a friendly and polite concierge service enabling our customer's guests and visitors to feel welcome. We look to provide guards who have strong interpersonal skills and a passion for customer care.

VPS TRAFFIC MANAGEMENT

VPS provide a complete range of industry-leading solutions to manage and monitor our highways, ensuring safety for both traffic management operatives and the road user.

MOBILE VARIABLE MESSAGING SIGNS

Hire the latest range of mobile Variable Message Signs (VMS) to complement our range of intelligent traffic solutions, or to simply and easily display a message. Choose from the HDC 3260 COMPACT or the ADVANTAGE 4280 to display your message in the most suitable way.

SMARTSENSOR HD DATA COLLECTION

Smart traffic depends on accurate, reliable data. SmartSensor HD is the only vehicle detector that provides all the data you need, including per vehicle speeds, vehicle counts, average speed, 85th percentile speed, occupancy and more. Featuring a high-definition non-obtrusive side-fired radar positioned at the side of the road, and a state of the art digital wave radar, VPS dual beam technology is the only radar designed from the ground up for traffic applications.

MULTILINGUAL LICENCE PLATE VMS ACTIVATION

Automatic numberplate recognition with vehicle nationality detection triggers multilingual language warning messages. Using the latest ANPR cameras, VPS can detect the nationality of vehicles that pass the camera and display a translated message on the mobile variable message signs ahead, keeping all our international road users safe and fully informed of any hazards.

TRAFFIC INCURSION SOLUTIONS

The latest analytic high-definition camera technology, mounted on our self-powered Smart Tower System, all linked wirelessly to integrated sounders mounted on traditional cones. Sounders and alert systems are immediately triggered when an incursion occurs and the highly visible Smart Tower captures and records the incident in real-time HD. Handheld remote control fobs are fitted with a button to disarm the system temporarily if a known works vehicle is entering the site. Additionally a panic button will alarm the workforce of an incident.

VJTS & QUEUE DETECTION

The VPS Virtual Journey Time System (VJTS) is a crowd sourced based system. VJTS is live, flexible and reactive and perfect for incident management, events and large infrastructure schemes. By eliminating the need for hardware, deployment costs are saved, delays in procurement are reduced and there is no risk to road worker safety. Journey time data is collected via cloud-based software and displayed automatically on our

mobile variable message signs if required. Slow moving traffic is detected using crowd sourced data, which in turn activates 'Queue Ahead!' on one or more variable message signs.

CCTV FOR HIGHWAY & WORK ZONE MONITORING

VPS workzone and highway monitoring solution utilises the latest CCTV cameras mounted on our Smart Towers. This allows us to have a fully integrated, rapidly deployable solution which is ideal for all long or short duration highway projects, and our systems can be monitored on site or from our state of the art Monitoring Station, with a video wall and operator terminal to view images. Using wireless 3G/4G or radio signal to communicate the system can be powered directly from the highway feeder

pillars, or can operate using batteries with solar recharge, hybrid diesel or solar battery

OVERHEIGHT DETECTION - BRIDGE STRIKE PREVENTION

Bridge strike incidents can cause death or serious injury to road and rail users and are financially costly to the vehicle owner and the railway. The VPS Over-Height Vehicle Detection System (OVDS) offers a proactive solution for owners and operators that want to actively monitor traffic on routes where overhead obstructions pose a strike risk, and provide strike warnings to drivers of vehicles that are too large. A pair of 'Electronic Goal Posts', mounted onto VPS Smart Towers, detect over-height vehicles on diversion route near any potential bridge strike locations. Variable messaging signs are automatically triggered, displaying clear warning messages, whilst an audible alarm sounds to instruct the driver to alter their course or stop before they reach the obstruction.

TM DASH CAM

Dash cameras designed specifically for use on highways feature auto image download, built in GPS, up to 8 hours run time, and day and night operation with inbuilt infrared.

PROPERTY GUARDIANS

OUR GUARDIAN SERVICE PROVIDES PROTECTION BY OCCUPATION, PROVIDING A COST-EFFECTIVE WAY TO KEEP YOUR PROPERTY SAFE, SECURE AND MAINTAINED TO A HIGH STANDARD.

Hiring security guards, installing cameras or getting reinforced steel bolted on to windows can not only dramatically increase maintenance costs, but will often highlight the fact that a property is empty.

This is where property guardianship schemes can be an effective and cost-effective solution to secure the vacant property.

Property guardianship offers security and protection for vacant properties whilst offering accommodation for working professional people across the UK. Property guardians take good care of buildings that would otherwise stand empty and ensure that during this time the property is secured and well maintained.

WHY USE VPS GUARDIANS

- ♦ Active on-site guardian presence works as a cost effective way to secure a vacant property from unauthorised entry, vandalism and squatters 24/7.
- ♦ Cheaper and safer alternative to boarding up windows or investing in expensive manned guarding options.
- ♦ Live-in guardians help dramatically reduce risk of damages caused by unexpected incidents such as burst water pipes or flooding because such issues can be quickly identified and reported.

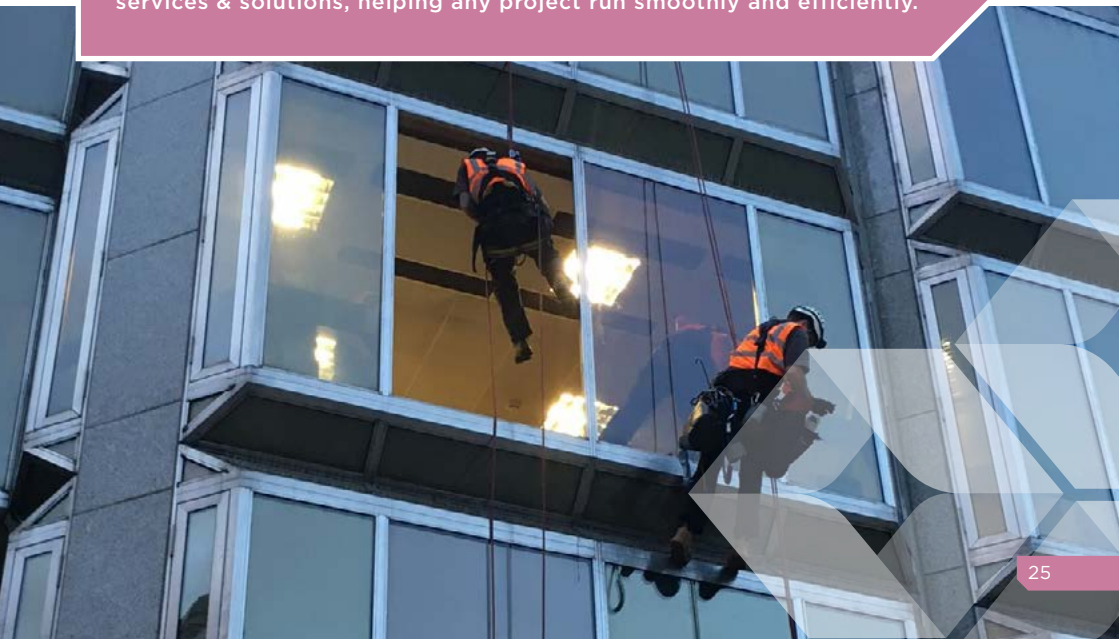

ADDITIONAL SERVICES

In addition to our core offering, VPS can provide additional services to cover any insurance compliance requirements or support more complex projects that you need assistance with. We do this by leveraging our large network of staff, depots, vehicles and partners to deliver solutions with full national coverage.

- ♦ Planned maintenance and property repairs
- ♦ Drain down of property and service isolation
- ♦ Letterbox seal
- ♦ Weekly fire alarm testing
- ♦ Secure collection, storage or destruction of goods
- ♦ Same day lock changes
- ♦ Commercial glazing and access
- ♦ Graffiti removal
- ♦ Wooden site hoarding
- ♦ Generator hire
- ♦ Skip/shipping container hire
- ♦ Welfare facilities and portaloos
- ♦ Lighting towers
- ♦ Access equipment hire

All of these services can be combined into one solution, all managed from our head office in Manchester. This means one point of contact for multiple services & solutions, helping any project run smoothly and efficiently.

BESPOKE INNOVATIONS

With a range of solutions to secure any site, VPS can design the perfect solution for your specific requirements. If the solution you need isn't listed we can still work with you to design a bespoke system so contact us to find out more. VPS have a vast operational pool of trained and experienced engineers, who will deliver consistency of approach and service certainty throughout the UK. Our national infrastructure, consisting of a strategically located network of 14 operational centres, provides unrivalled levels of operational reach and response capabilities. Our ability to transfer stock and resources within our service network greatly enhances resource resilience and supports a flexible, responsive service on a 24/7 basis.

4G PTZ CAMERA

A totally stand-alone PTZ, HD camera with built-in 4G router and SD card for local recording. Up to 150m range with 25x optical zoom - all that is required is a power source and this camera is up and running. With advanced artificial intelligence and smart analytics there is no requirement for separate detection devices. This product will connect to the strongest carrier network available in the area. This camera can also be linked into the VPS Monitoring Centre via secure VPN link for event triggering and response.

DRONE SERVICES

The use of drones provides quick, cost-effective, non-invasive solutions for surveying, inspections, or monitoring many different services or situations. The VPS drone service provides an ideal solution for inspecting and surveying hard-to-access structures, land, infrastructure projects or road networks, removing the need for costly specialist access equipment. VPS clients have also benefitted from the use of drones to monitor people safety during high risk evictions and provide detailed footfall analysis at public events.

ECO TOWER

The ECO tower provides a modular One Design For All offering.

Up to 4 x HD cameras can be fitted with advanced analytic solutions on board to remove the need for passive detection and hence false alarm reduction.

The PTZ camera offers up to 150m range and auto tracking as standard (day/night).

The modular design and analytic detection allows for configuration to be local or remote with minimal need for on site set up.

All cameras are HD with up to 31 days recording. Multiple power options are available on the same design (mains, hydrogen, methanol, solar). This design allows for single or dual powering to reduce/remove any reliance on site power - the product will intelligently switch between power options for most efficient fuel savings. The low power design gives up to 24hours battery backup as standard or up to 7 days backup with external battery pack.

The product will connect to the strongest network available thus allowing for deployment in remote locations. The tower will also be linked into the VPS Monitoring Centre via secure VPN link for event triggering live audio challenge from wide area sounder via our Monitoring Centre. There are many optional extras available including: thermal cameras (up to 500m), 100m analytic cameras, app based viewing and WiFi networking.

SOLAR CAMERA

This totally stand-alone HD camera solution comes with solar powering and a battery backup, and can be rapidly installed in under 10 minutes using a simple pole mount bracket. The camera has a 50m day/night range with advanced analytics built in for false alarm reduction (no separate detection required). The in-built router will allow connection into the VPS monitoring centre via a secure VPN link, the product will connect to the strongest network available thus allowing for deployment in remote locations.
